

Please help us to get a better view
on the current practice of CI fitting in different centres.

Do you know how people reply to questions like

“If we change the audiologist performing the programming
with another audiologist from another service,
how will the resulting programs compare?”

Or that the average responder accepts all SoundWave default settings
except for

Volume Range
Strategy
Audio Mixing

Or that on average **14 hours of professional time** are spent at the
programming (including the testing) of a cochlear implant during year 1:
